stefano-lev@protonmail.com

Computer Science graduate with strong foundations in C++ and Python and experience building full-stack web applications and software tools. Comfortable designing systems, debugging complex problems, and developing maintainable code in Linux environments. Seeking an entry-level software engineering role contributing to scalable backend systems and modern web applications.

Technical Skills

Languages: C++, Python, JavaScript, Java (familiarity), Go (basic)

Tools & Systems: Linux, Git/GitHub, Bash

Web Technologies: React, HTML, CSS, REST APIs

Other: SQL (basic), Tailwind CSS, Vite

Software Development Experience

- Designed and developed multiple personal software projects using **Python, C++, and JavaScript**
- Built full-stack web applications using **React and REST APIs**
- Worked extensively in **Linux development environments using Git and Bash**
- Practiced debugging, testing, and iterative feature development through independent projects

Projects

SeiRaji Tracker – Full-Stack Media Tracking Web App

- Built and deployed a full-stack web application for tracking Japanese radio programs and episode progress across multiple content platforms
- Built a responsive React/TypeScript frontend featuring searchable media libraries, personalized tagging systems, activity timelines, and persistent user state
- Developed backend services in Node.js/Express to scrape, normalize, and cache external platform data into a unified API layer

Kanji Shishou – Web-based Study Application

- Designed and deployed a fully functional, responsive web application powered through React
- Implemented interactive study features and asynchronous communication
- Focused on clean UI, usability, and maintainable architecture

py-image-stitcher – Desktop Utility

- Developed a Python desktop application using Tkinter for stitching images into simple collages
- Demonstrates Python scripting, GUI development, image-processing workflow
