SUMMARY

Computer Science graduate building full-stack web applications with React, TypeScript, Node.js, and Express. Experienced developing deployed projects with responsive frontends, REST APIs, data scraping, caching, persistent user state, and production hosting through Cloudflare Pages and Render. Seeking an entry-level software engineering role focused on modern web applications, backend services, or developer tools.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, C++, SQL, Go (basic)

Frontend: React, Vite, Tailwind CSS, HTML/CSS, responsive UI

Backend: Node.js, Express, REST APIs, data scraping, JSON normalization, caching

Tools: Git, GitHub, Linux, Bash, Cloudflare Pages, Render

SELECTED PROJECTS

SeiRaji Tracker - Full-Stack Media Tracking Web App

React, TypeScript, Node.js, Express, Tailwind CSS, Render, Cloudflare Pages

- Built and deployed a full-stack media tracker for Japanese radio, podcast, and streaming programs.
- Developed a responsive React/TypeScript frontend with searchable libraries, tagging, pinned items, progress tracking, activity history, statistics, and user preferences.
- Built a Node.js/Express backend that imports, normalizes, caches, refreshes, and serves external media metadata through a unified API layer.
- Implemented platform-specific importers for RSS feeds and Japanese media services, normalizing episode metadata, thumbnails, durations, publish dates, and refresh workflows.

Kanji Shishou - Japanese Kanji Study Application

React, TypeScript, Node.js, Express, Tailwind CSS, Vite

- Designed and deployed a responsive kanji study app with flashcards, multiple-choice quizzes, spaced repetition review, dictionary lookup, and progress tracking.
- Built reusable React components for quiz flows, study summaries, statistics, preferences, and review workflows.
- Integrated structured kanji data and stroke-order resources to support learner-focused study tools.

EDUCATION

Texas State University, San Marcos, TX - B.S. Computer Science, Dec. 2025
